Reviewer’s report

Title: Presentation and management of keloid scarring following median sternotomy: a case study.

Version: 1 Date: 26 October 2010

Reviewer: kostas papagiannopoulos

Reviewer’s report:

Interesting case report. The surgical management of keloids will always be criticized as patients often redevelop keloid.

I would use caution regarding the results as the follow up is not long enough and this patient could redevelop symptoms.

Regarding the use of cica care it is advisable to be used immediately after surgery and the authors should have done this in the immediate postoperative period.
