Reviewer's report

Title: Carinal Surgery: Experience of a single center and review of the current literature

Version: 1 Date: 29 March 2010

Reviewer: Panagiotis Dedeilias

Reviewer's report:

This is a valuable paper regarding Carinal Surgery. Although in the current literature there are reports of larger series it is always worth it to present a single center's experience with review of the literature.

The paper though needs improvement in the presented form prior to publication. It requires minor language improvements and also to be rewritten in a proper form rather than as a power point presentation.

Table 2 also needs revision. Usually informations from the literature are not presented as a table but preferably mentioned in the discussion.

The discussion can be improved including comments on and the data of table 2. Please consider the above advises and then the paper can be published.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
