Reviewer's report

Title: Carinal Surgery: Experience of a single center and review of the current literature

Version: 1 Date: 10 April 2010

Reviewer: DIMITRIOS MIKROULIS

Reviewer's report:

The topic of this article is the surgery of carina, a technical challenge for the thoracic surgeon and a debatable treatment concerning the mortality and the long-term survival of the patient. The authors quote a small number of patients, but with an interesting discussion and contemporary references. Therefore I recommend the publication of this article as interesting and useful for the readers of your journal. In the table 1, last column "Status", I suggest to complete how many months is alive every patient or how many months was the survival and not only if he is dead or alive.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
