Reviewer's report

**Title:** Acute left main coronary artery thrombosis due to cocaine use

**Version:** 1  **Date:** 8 June 2010

**Reviewer:** FANY CHRONIDOU

**Reviewer's report:**

A very interesting and unusual case report for cardiac surgery practise.
I would like to ask the authors at first, if they had to modify the usual drug postoperative management of the patient due to chronic cocaine abuse and secondly if they know from literature how severe endothelium damage is caused from cocaine abuse, so this would predispose a new thrombosis to the graft or to the remaining native vessel.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable
