Reviewer's report

Title: Coronary artery bypass surgery in a patient with Kartagener syndrome: a case report and literature review.

Version: 2 Date: 13 June 2010

Reviewer: hilmar HD doerge

Reviewer's report:

The authors present their experience with a patient with a Kartagener syndrome undergoing CABG. They chose the off-pump procedure with respect to severe pulmonary dysfunction, and they describe the technical considerations with respect to graft choice. They provide a detailed analysis of the literature with focus on graft choice.

The presented case report deals with an extraordinary rare topic. The authors provide useful information for cardiac surgeons confronted with CABG in patients with dextrocardia, especially when associated with severe pulmonary dysfunction. The report is clearly structured and informative, and it is well written.
