Reviewer's report

Title: Synchronous primary intrapulmonary and mediastinal thymoma-A case report

Version: 1 Date: 13 August 2010

Reviewer: Kevin Liu

Reviewer's report:

This case report describes the presentation and management of a synchronous primary intrapulmonary and mediastinal thymoma. The authors presume that these tumors were synchronous because of the anatomically distinct locations in the mediastinum and the right lung with no evidence of metastatic disease in associated lymph nodes or in the pleura. In addition there was a slight histological difference between the two tumors. This case is worth publication.
