Title: Synchronous primary intrapulmonary and mediastinal thymoma-A case report

Version: 1 Date: 13 August 2010

Reviewer: Jack Jia

Reviewer’s report:

The author describes a case of a 55-year-old man with a thymoma localized within the thymic lobe and the adjacent right upper pulmonary lobe. Synchronous primary intrapulmonary and mediastinal thymoma happens quite rarely, which was reported in few literatures as far as I know. Therefore I recommend this article to publish in Journal of Cardiothoracic Surgery. Hopefully the audience could recognize and take cautious consideration for this disease.

Level of interest: An article of importance in its field
