Reviewer’s report

Title: Long term follow up after surgery in congenitally corrected transposition of the great arteries with a right ventricle in the systemic circulation.

Version: 2 Date: 11 June 2010

Reviewer: Pieter van de Woestijne

Reviewer’s report:

Given the fact that CCTGA is a rare cardiac anomaly these data of a small group of patients over a long period contributes to more understanding of the potential problems. Especially the discussion part is interesting to read for a good overview of differences in literature and types of correction and its specific problems in the future. It is therefore worth reading for all people working in this difficult field facing patients with CCTGA at any stage of life.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
