Reviewer’s report

Title: Long term follow up results of sequential left internal thoracic artery graft on severe left anterior descending artery disease

Version: 1 Date: 1 September 2010

Reviewer: Murat Guclu

Reviewer’s report:

I congratulate the authors for their promising results using their method for left anterior descending artery revascularization. I believe the manuscript may be a valuable contribution for the cardiac surgeons performing CABG.

The question posed by the authors is new and well defined. The methods are appropriate and well described, and are sufficient details provided to replicate the work? The data sound and well controlled? The manuscript adheres to the relevant standards for reporting and data deposition. The discussion and conclusions are well balanced and adequately supported by the data. The title and abstract accurately convey what has been found. The writing acceptable and clear.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
