Reviewer's report

Title: Long term follow up results of sequential left internal thoracic artery graft on severe left anterior descending artery disease

Version: 5 Date: 7 October 2010

Reviewer: sertac cicek

Reviewer's report:

This is a review of authors' experience on sequential grafting of left internal thoracic artery. This well-written and discussed by the authors, however, they use an arbitrary definition of one mm probe to decide whether or not to bypass internal mammary. I would recommend adding the preoperative angiographic data and should compare this with probing. There are minor grammatical errors.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
