Reviewer’s report:

Comments to the Author
The authors reported a very interesting case of a huge metastatic hepatocellular carcinoma provoking acute heart failure. Indeed the metastatic profile of hepatomas within the heart is uncommon. However the fact that this rare pathology can cause acute heart failure is worth publishing. The case is well described and I do not have major comments. I only suggest to consider changing the title of your manuscript into “Acute heart failure caused by a giant hepatocellular metastatic tumor of the right atrium” which seems to more appropriate in interpretation.
