Reviewer's report

Title: A huge hepatocellular metastatic tumor of the right atrium causing acute right heart failure: A case report.

Version: 1 Date: 12 April 2011
Reviewer: Efstratios Koletsis

Reviewer's report:

In this paper an unusual presentation of a metastatic hepatocellular tumor to the right atrium causing acute right heart failure is presented. The case is well described and emphasis has been given to the need of an urgent preoperative CT scan in order to detect the origin of the primary tumor, to assess the operability of the disease as well as to differentiate the diagnosis among other medical entities such as renal tumors extended to the heart. It makes a contribution and improves medical knowledge and will seek interest of cardiothoracic surgeons, cardiologists, radiologists and oncologists and therefore merits publication.

Level of interest: An article of importance in its field
