Reviewer's report

Title: Multiple right pulmonary nodules. Advanced cancer or resectable early stage tumor?

Version: 1 Date: 14 June 2011

Reviewer: gerard silvestri

Reviewer's report:

This is a simple but reasonable case report. The authors could emphasize the fact the the first site of presumed metastatic disease should almost always be biopsied so that patients are not precluded from having potentially curative surgery based on a CT or PET finding.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Declaration of competing interests:

no competing interests.
