Reviewer's report

Title: Successful Treatment of Novel H1N1 Influenza related Fulminant Myocarditis with Extracorporeal Life Support

Version: 1 Date: 20 October 2011

Reviewer: Christoph Wiese

Reviewer's report:

No revision needed.

Manuscript is fairly written. The discussion covers H1N1 infection, fulminant myocarditis, and previous attempts to treat it. The language is acceptable and grammar is alright (still needs a revision for grammatical errors). Taken into consideration its message for early intervention, I think the article is valuable and should be considered for publication.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
