Reviewer's report

Title: Is there an optimal minimally invasive technique for left anterior descending coronary artery bypass?

Version: 2 Date: 17 February 2011

Reviewer: Thierry Folliguet

Reviewer's report:

Concerning this manuscript I have reviewed it.
It concerns one of the largest experience of a single center in France for robotic coronary treatment.
The manuscript is well written and the conclusions are sound.
It clearly provides the results of the three techniques robotic midcab or opcab.
The results of the tecab or robotic are clearly inferior to the other two techniques which is in accordance with previously published data.
It is therefore an important manuscript which should be published.
