Reviewer’s report

Title: Single-Incision Thoracoscopic Surgery for Primary Spontaneous Pneumothorax

Version: 1 Date: 13 February 2011

Reviewer: Vipin Zamvar

Reviewer’s report:

The authors compare single incision thoracoscopic surgery versus three post thoracoscopic surgery for treatment of spontaneous pneumothorax.

Question for the authors: Operating through a single port must make the procedure technically more difficult. Don’t the instruments come in the way of each other and the thoracoscope?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
