Reviewer's report

Title: Off-Pump Coronary Artery Bypass in Poland syndrome with dextrocardia

Version: 1 Date: 4 April 2011

Reviewer: Brian M Fabri

Reviewer's report:

This is an interesting case report mainly because of the rarity of Poland syndrome as an entity. The main strategy difference was in the use of the RIMA to the LAD (rather than he LIMA) and this is sensible considering the close proximity of the RIMA to the LAD. Otherwise there need not be an change in the principles and approach as for the off pump technique. Th somewhat 'awkward' orientation is more of a nuisance effect rather than a major difficulty
