Reviewer's report

Title: Bronchogenic cyst associated with pericardial defect: Case report and review of the literature

Version: 1 Date: 10 April 2011

Reviewer: Ken Kodama

Reviewer's report:

The authors describe a patient who successfully treated by VATS approach using the harmonic scalpel for the resection of BC arising from the upper border of the PD. I think that they well presented this case and also well discussed the essential point.

As an minor essential revision, please discuss the benefit of the technique combibed VATS and harmonic scalpel when compared with other combination technique, such as VATS with electric cautery.

Level of interest: An article of importance in its field
