Reviewer's report

Title: Alveolar adenoma of the lung: unusual diagnosis of a lesion positive on PET scan. A case report.

Version: 1 Date: 26 October 2011

Reviewer: piero zannini

Reviewer's report:

Minor revisions

On the basis of the results of the present and of the previous report, the authors should therefore specify if they consider PET scan of any help in the assessment of these lesions, considering that surgical treatment was performed anyway.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable
