Reviewer's report

Title: Aortic valve stenosis after previous coronary bypass: Transcatheter valve implantation or aortic valve replacement?

Version: 1 Date: 17 January 2012

Reviewer: Changqing Gao

Reviewer's report:

Aortic Valve surgery after previous CABG is always challenging. Since the introduction of TAVI, these patients are now referred to alternative option. The report of the comparison between TAVI and AVR in patients with severe aortic valve stenosis and previous CABG is an important reference for clinical work although the sample in the paper is small.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
