Title: Rare Early Prosthesis Obstruction after Mitral Valve Replacement: A Case Report and Literature Review

Version: 2 Date: 7 January 2012

Reviewer: Mohan Devbhandari

Reviewer’s report:

I have read with interest the paper entitled Rare Early Prosthesis Obstruction after Mitral Valve Replacement: A Case Report and Literature Review by Jun Shi and colleagues. The authors report successful surgical management of a case of early mitral valve replacement for obstruction due to pannus. I feel the case report merits publication in the journal in view of rarity of this event so early after a valve replacement. I have found few grammatical errors which need addressing before going on to publication. I recommend publication after revision.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published
