Reviewer's report

Title: False positive endobronchial ultrasound-guided real-time transbronchial needle aspiration secondary to bronchial carcinoma in situ at the point of puncture: a case report

Version: 1 Date: 11 June 2012

Reviewer: Tatsuya Inoue

Reviewer's report:

Major
1. The authors should show the patient's stage by UICC-7 staging system.

Minor
1. Page 3, line 27 and Page 7, line 8; 'bronquial' 'bronchial'
2. Page 5, line 13; 'de' lymph node 'the' lymph node
3. The authors should show a TBNA specimen cluster of malignant cells with lymphocytes in Figure 2a.

The case report has some weakness, however, which need to be revised before publication can be recommended.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
