Reviewer’s report:

"Ventricular Assist Device Outflow Graft in Congenitally Corrected Transposition of Great Arteries - A surgical challenge",
a good composed paper. The topic is original and I have read with great interest.
The Harefield Group describes a technique how to deal with patients who have a congenitally
corrected transposition of great arteries with the need of mechanical support.
These patients group is very rare and that is probably the reason of less information in the literature. However due to increasingly implantation of LVADs this procedure will appear more often. And I think this will be a big challenge in the future.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
