Reviewer's report

**Title:** Complete Resection of Undifferentiated Cardiac Sarcoma and Reconstruction of the Atria and the Superior Vena Cava: Case Report

**Version:** 1  **Date:** 4 July 2012

**Reviewer:** Vipin Zamvar

**Reviewer's report:**

The authors describe case of surgical treatment of a cardiac sarcoma involving the right atrium. Surgical treatment involved resection of parts of the right atrium, and parts of the left atrial dome, and parts of the superior vena cava. After such extensive resection, bovine pericardium was used for reconstruction. Surgical treatment of such tumors is rare, and will be of interest to the readership. Some more technical details would help to make the manuscript better.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable
