Reviewer's report

Title: Surgical approach for the treatment of aortoesophageal fistula combined with dual aortic aneurysms: A case report

Version: 2  Date: 3 August 2013

Reviewer: Tianxiang Gu

Reviewer's report:

Aortoesophageal fistula is a fatal and rare complication of aortic aneurysm. At present, it is very difficult to deal with. Congratulations to the authors for the good result they achieved. The authors operated the patient under the emergent situation with less invasive technique, which would be an alternative approach for this kind of severe cases. My suggestion for the authors is that to give some details of the death and to discuss that.
