Reviewer’s report

Title: Risk factors for endotracheal re-intubation following coronary artery bypass grafting

Version: 1 Date: 18 April 2013

Reviewer: Henrique Murad

Reviewer’s report:

Discretionary revisions: 1- Background, at the final comment: the aim is not prevent reintubation, but to prevent the conditions that led to reintubation; 2- The intubation time of 48 hours is a prolonged one. Probably if it was used 24 hours the information would be more sounded

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
