Reviewer's report

Title: Mediastinitis and sternal prosthesis infection successfully treated by minimally invasive omental flap transposition

Version: 1 Date: 24 September 2012

Reviewer: Roberto Crisci

Reviewer's report:

I am pleased to evaluate this interesting article, which shows originality and strong focus on targets. At the discretions of Authors I suggest the following changes:
- The abstract must be shortly;
- Pag. 3, line 9: Five months earlier, patient underwent surgery....;
- Pag. 4, line 16-17: Patient was discharged on postoperative day 10, receiving intravenous antibiotic therapy for another 2 weeks......;
- The advantages of omental flap by laparoscopy must be carefully described in the discussion section.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
