Reviewer's report

Title: Mediastinitis and sternal prosthesis infection successfully treated by minimally invasive omental flap transposition

Version: 1 Date: 28 September 2012

Reviewer: Tiziano De Giacomo

Reviewer's report:

The is an interesting and well written case report. It describes a quite simple but effective method to treat a severe complication after sternal resection complicated by infection and mediastinitis. I suggest to publish it.

Level of interest: An article whose findings are important to those with closely related research interests
