Reviewer’s report

Title: Out come of surgical treatment for proximal long segment post intubation tracheal stenosis

Version: 1 Date: 19 December 2012

Reviewer: mohammad taghi rajabi mashhadi

Reviewer’s report:

The article is about surgical techniques of tracheal resection in 20 patients and the results presented are based on suprathyroid releasing technique along with bilateral hyoid resection.

1- The results are acceptable and considering serious technical difficulties (in releasing & bring the 2 edges of trachea is useful and appreciable

2- The methodology is good and the results are acceptable

3- A revision of the English text is needed.

4- The article is informative and printable

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
