Reviewer's report

Title: Two Cases of a Rare Association: Double Aortic Arch with Tetralogy of Fallot

Version: 2 Date: 10 December 2012

Reviewer: Andrew Robert Harper

Reviewer's report:

Thank you for inviting me to review the Zhi-qiang Li et al. manuscript describing 2 patients with Tetralogy of Fallot and double aortic arch. This is an interesting article which clearly highlights the role of cardiac CT within congenital heart disease.

The level of written English will need improving before being accepted for publication.

The key clinical features are well documented, however, it may be prudent to describe the clinical features of each case individually.

It would be useful to know if any genetic analysis was conducted on these patients?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Declaration of competing interests:
