Reviewer's report

Title: Two Cases of a Rare Association: Double Aortic Arch with Tetralogy of Fallot

Version: 2 Date: 5 January 2013

Reviewer: Chris Klonaris

Reviewer's report:

This manuscript describes two cases of double aortic arch associated with tetralogy of Fallot. Although this is a rare association, there are already published reports in the literature (Cardiol Young. 2011 Dec;21(6):695-6, Asian Cardiovasc Thorac Ann. 2009 Aug;17(4):433-4, Interact Cardiovasc Thorac Surg. 2009 Feb;8(2):277-9 etc.)

1. Major Compulsory Revisions

To my opinion the authors fail to highlight a particular reason that could justify publication of this article.

Besides, description and presentation of the two cases is not clear enough. It would be probably better to present separately the two cases in two different sections, one for each patient.

2. Minor Essential Revisions

Finally the manuscript needs English editing for grammatical errors (e.g. Clinical examination of the two children were as following…, Both the patient has given their consent..etc)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published
