Reviewer’s report

**Title:** Reexpansion pulmonary edema after treatment of simultaneous bilateral spontaneous tension pneumothorax

**Version:** 1  **Date:** 5 January 2013

**Reviewer:** Vipin Zamvar

**Reviewer’s report:**

The authors describe a patient who had bilateral spontaneous pneumothorax, and developed pulmonary edema on the right side after relief of the pneumothoraces by bilateral chest drain insertion.

Can the authors speculate on the mechanisms of unilateral development of pulmonary edema?

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable
