Reviewer's report

Title: Late Presentation of Congenital Diaphragmatic Hernia after a Diagnostic Laparoscopic Surgery (a case report)

Version: 1 Date: 9 May 2012

Reviewer: Sion Barnard

Reviewer's report:

Interesting although not unique report. The assumption is of a Morgagni hernia although the position was described as anterolateral-the true Morgagni is more medially placed. Was there a history of trauma? There is a typo ("of her initial") on p8 but it otherwise reads well. Comparison with the ref 6 would help-it appears to contradict their conclusion as to uniqueness of the case. The review in Postgraduate Med J 2005 (81:41-44) suggests 8% of CDH present in the young age group.
