Reviewer’s report

Title: Transthoracic Minimal Invasive Closure of Ruptured Sinus of Valsalva Aneurysm

Version: 3 Date: 5 November 2013

Reviewer: Francisco A Costa

Reviewer’s report:

The authors have accepted the reviewers suggestions and made the corrections accordingly.
However, there is still many typing errors that still need some revision.
Although the authors improved the reasons to justify why they performed this approach, it still seems that there was a bias in directing the patient to "accept" this "less invasive approach".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Declaration of competing interests:
