Reviewer's report

Title: Thrombosis of a Descending Thoracic Aortic Endovascular Stent Graft in a Patient with Factor V Leiden

Version: 1 Date: 31 October 2013

Reviewer: Grayson H Wheatley

Reviewer's report:

This is a well-written case report highlighting an important limitation/concern with aortic stent-grafts. The manuscript details the successful treatment of a thrombosed aortic stent-graft which required surgical replacement. The patient has a hypercoaguable syndrome and stopped taking his warfarin.

The references and images are appropriate for the case report. The discussion is focused and there are no outstanding issues.
