Reviewer's report

**Title:** Single Incision Thoracoscopic Right Upper Lobectomy with Systematic Lymph Node Dissection

**Version:** 3  **Date:** 8 January 2014

**Reviewer:** Shigeki Sawada

**Reviewer's report:**

Single incision VATS is a challenging technique and will be an alternative way in selected patients. Several issues needs be solved, for example safety, quality of LN dissection and advantage of single incision VATS, before this technique is generalized. A case report, however, will be the first step to it.

I hope that this paper encourages surgeons in our country to apply this technique and to evaluate the advantages or disadvantages properly in the future.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Declaration of competing interests:**

I declare no conflicts of interest.
