Reviewer’s report

Title: A case of penile fracture with complete urethral disruption during sexual intercourse

Version: 6 Date: 29 March 2007

Reviewer: Evangelos Liatsikos

I am familiar with the literature and believe that this case meets one of the 7 criteria for evaluation in the journal: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Comments to authors:

General

Revisions necessary for publication

The authors present a case report of penile fracture with complete urethral disruption during sexual intercourse.

The manuscript should be revised by a native English speaker.

It would be interesting for the reader to have a figure of the urethrogram showing the clinically insignificant urethral stricture.

In the discussion section the authors should consider clarifying the mechanism of penile fracture in the Eastern world. The term “low energy manipulation” should probably be rephrased.

The authors state that they have an acknowledgement list but do not provide one.

What next?: Accept after minor revisions

Quality of written English: Needs some language corrections before being published
