Reviewer’s report

**Title:** Arthroscopic Decompression and Notchplasty for Longstanding Anterior Cruciate Ligament Impingement in a Patient with Multiple Epiphyseal Dysplasia (MED): A Case Report

**Version:** 1  **Date:** 10 April 2008

**Reviewer:** A Mohan

I am familiar with the literature and believe that this case meets one of the 9 criteria for evaluation in the journal: None

**Has the case been reported coherently?:** Yes

**Is the case report authentic?:** Yes

**Is this case worth reporting?:** Yes

**Is the case report persuasive?:** Yes

**Does the case report have explanatory value?:** Yes

**Does the case report have diagnostic value?:** Yes

**Will the case report make a difference to clinical practice?:** Yes

**Is the anonymity of the patient protected?:** Yes

**Comments to authors:**

It is a good case report with a message. I will recommend this for publication but will need some fine changes like in case presentation about the 10 degrees of fixed flexion deformity. I will suggest reference number for oxford score and SF36. Last paragraph of discussion needs to be clear in terms of message.

**Quality of written English:** Needs some language corrections before being published
