Reviewer's report

Title: Right subclavian double steal syndrome

Version: 1 Date: 3 June 2008

Reviewer: JOHN GRINIATSOS

I am familiar with the literature and believe that this case meets one of the 9 criteria for evaluation in the journal: New associations or variations in disease processes

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The authors report the unusual clinical presentation of double (instead of single) subclavian steal syndrome. The patient was investigated by the "gold standard" methods and was treated by the recommended surgical option.

COMMENTS:

1. I think that references from the decade of '60 should be replaced by recent ones, except the reference which is highly explanatory for the disease.
2. The references have not been formatted according to the JMCR instructions for authors. Please check and correct accordingly.
3. Please renumerate in the correct order the references throughout the text.(the order 5, 13, 14, 16, 5, 7, 8, etc) is incorrect.

Quality of written English: Acceptable
