Reviewer’s report

Title: A survivor of childhood medulloblastoma presenting with growth hormone-induced edema and inflammatory lesions: case report.

Version: 3 Date: 12 May 2008

Reviewer: Amin Gohary

I am familiar with the literature and believe that this case meets one of the 9 criteria for evaluation in the journal: An unexpected event in the course of observing or treating a patient

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: No

Comments to authors:

There are several statements that need to be corrected or re-written:
1- under Abstract in the introduction the paragraph starting with "If it is widely accepted -" I believe is ambiguous and needs to be re-written in simple English.
2- Under Introduction paragraph 3 describes the cancer risk of GH which is then repeated in paragraph 4. I would suggest to delete paragraph 3 and suffice with the first line in paragraph 4.
3- In page 5 there is a spelling mistake in line 16 "than" which should be "then"
4- in conclusion the part on page 6 in my opinion adds very little and should be deleted. highlighting the fact that other tools including radiotherapy, chemotherapy and stem cell transplant may have contributed to the good outcome

Quality of written English: Needs some language corrections before being
published
