Reviewer's report

Title: 2D powerDoppler-3D Ultrasound imaging of a cesarean section dehiscence with utero-peritoneal fistula:a case report.

Version: 4 Date: 15 October 2008

Reviewer: Hélio Guimarães Filho

Which of the following following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The author presents one rare and interesting case of utero-peritoneal fistula in a cesarean scar defect. The figures are of excellent quality and illustrate the case clearly.

However, the end of the introduction must be modified and the text reserved for the conclusion. To change the text “We can conclude that transvaginal power Doppler ultrasound is highly accurate detecting caesarean section dehiscence and uterine fistula”. It can be: Our objective is to report an unusual case of utero-peritoneal fistula in cesarean scar defect diagnosed by color Doppler hysterosonography and 3D ultrasound.
