Comments to authors:

This report show interesting complication of craniosynostosis. CT or MRI finding should be shown to indicate craniomeningocele.
Can you exclude other etiology that can cause bone effect? You shoud show some data and discussion on this point.
Is this patient screened for cytogenetical disorders? If yes, show family historu, results of cytogenetic analysis, etc.
Conclusion is the reperat of discussin. It should be revised.
English should also be refined.

Quality of written English: Needs some language corrections before being
published
