Reviewer’s report

Title: Acute febrile neutrophilic dermatosis (Sweet's syndrome) in a child, associated with a Rota virus infection: a case report

Version: 1 Date: 7 April 2010

Reviewer: Peter von den Driesch

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

Very interesting case.

A few changes would improve the paper:

1. Regarding the clinical appearance in your child the disease should be termed: "Atypical" Sweet’s syndrome

2. A short discussion text should be added regarding the differential (and the problems we sometimes have) to acute bullous pyoderma gangrenosum

Quality of written English: Needs some language corrections before being
published
