Dear Editors

We are pleased to resubmit our manuscript entitled “A case of neurofibromatosis type I (von Recklinghausen’s Disease) with a duodenal gastrointestinal stromal tumor that was difficult to distinguish from a pancreatic neuroendocrine tumor” for publication consideration in “Journal of Medical Case Report.” Among the NF-1 associated GISTs, duodenal GISTs are particularly difficult to distinguish from periampullary endocrine tumors, not only in terms of the radiological findings, but also in terms of the etiological features. I changed our manuscript according to your good advices. We believe that our paper would be of great interest to the readers of “Journal of Medical Case Report” and look forward to hearing your response.

Sincerely yours,

Noritoshi Kobayashi, M.D., Ph.D.
