Is this case worth reporting?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The described case is the second in this type of patients. Thus, some review of cardiovascular and overall mortality and morbidity of these patients should be mentioned. Also, the authors should provide the patient medical history and, mainly, current symptomatology leading to coronary evaluation. pertinent laboratory data including hsCRP, detailed lipidogram, echocardiography and angiographic findings. The English is poor. If this is corrected I think the data are worth publication.
