Reviewer's report

**Title:** Coronary artery surgery in a patient with achondroplasia - a rare case report

**Version:** 2  **Date:** 26 April 2010

**Reviewer:** Ioannis Karantzis

**Comments to authors:**

1) It is an interesting and prototype topic as only a few sporadic references to the subject can be found after literature research.

2) As far as the coverage of the issue is concerned, I consider it thorough, with adequate presentation of the patient’s history and individual characteristics.

3) The paper is linguistically solid, although I myself am a fluent, but not a native English speaker.

4) The photograph of the patient is of a good analysis and with the fool face coverage his anonymity is guaranteed.

In conclusion, I recommend the manuscript for publication in your esteemed journal, proposing “acceptance” in its current form.
