Reviewer’s report

Title: Computed Tomography Imaging of Subpleural Lipoma: A report of two cases.

Version: 1 Date: 7 April 2010

Reviewer: Andreas Hansch

Comments to authors:

the paper is well written and I suggest the publication.
However, I have following suggestions:

1. Figure 7 is not adequate. The lipoma is not visible.
2. The authors have to discuss the possibility of an atypical lipoma.

well-differentiated liposarcomas have also predominantly fatty appearance (see Cases J. 2008 Nov 4;1(1):296.).
