Reviewer's report

Title: Recurrent Spontaneous Hip Dislocation in Neurofibromatosis Type I: a case report

Version: 2 Date: 25 July 2010

Reviewer: Makram Zrig

Which of the following best describes what type of case report this is?: An unexpected association between diseases or symptoms

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: No

Is the case report persuasive?: Yes

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

This case report was interesting but does not add any new knowledge information to what currently exists and is anticipated to have a low impact factor. The fact that 12 cases were noted in their literature review suggests that the authors may be able to use that data for analysis or the design of prospective randomised studies.

Quality of written English: Acceptable
