Reviewer’s report

**Title:** Severe psychogenic tremor of both wrists in a 13-year old girl treated successfully with a customized wrist brace: a case report

**Version:** 3 **Date:** 30 July 2010

**Reviewer:** Jennifer Hui

Which of the following best describes what type of case report this is?: Presentations, diagnoses and/or management of new and emerging diseases

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The treatment of psychogenic movement disorders is notoriously difficult and without standard practice, especially in children. This case report is an interesting example of a successful outcome with an aggressive intervention. Its publication will add to the clinical knowledge of how to intervene in cases of psychogenic movement disorders, and aid others in formulating a treatment plan for similar patients. The fact that this disorders presented in a child is also interesting in and of itself.

It would help to know the duration of the patient's inpatient hospitalization, as well as the total duration of her treatment.
Thank you for submitting.
