Is the case report persuasive?: No

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

This topic concerning- the adverse effects induced by psychotropic medications, is actual and presents much interest to clinicians. There are however, some remarks, which make this paper unsuitable for publishing in its present state. The Introduction is written too generally, and there is no patophysiological explanation for the discussed phenomenon. A short review of literature concerning the theme is also lacking, despite the fact that there are many relevant written sources. In the Discussion there is no case discussion.

Quality of written English: Acceptable
